

TUAN KIEU ANH

Game Developer — Unity & Unreal

+84 98 930 88 67 | tuanka1904@gmail.com | linkedin.com/in/tuanka19 | Portfolio: tuanka1904.github.io

SUMMARY

Game developer with 8+ years of hands-on experience building gameplay systems, tools, and performance-critical features in Unity (C#) and Unreal Engine (C++/Blueprints). Strong focus on game systems engineering — inventory/crafting/loot, state machines, data-driven design — and deep optimization (profiling, GPU compute, memory). Comfortable owning features end-to-end and working closely with designers, artists, and testers in small teams.

TECHNICAL SKILLSET

- **Unity (C#):** gameplay systems, ScriptableObject data pipelines, custom Editor tooling, compute shaders, profiling & optimization (CPU/GPU/memory).
- **Unreal Engine 4/5:** C++ & Blueprints — combat systems, AI, animation, Niagara VFX.
- **CS foundations:** OOP, data structures & algorithms, design patterns (state machine, object pooling, command, observer, MVC/MVP).
- **Languages:** C#, C++, Python, JavaScript, Swift.
- **Tools & workflow:** Git, Perforce, Visual Studio/Rider, Xcode; Google Sheets/Excel for data-driven balancing & config workflows.
- **Backend & services:** PlayFab (auth, player data, cloud services), Node.js.

HIGHLIGHTED PROJECTS

Catfe Vault — RPG Inventory / Crafting / Loot Toolkit *Unity, C#*

- Designed and built a modular RPG systems toolkit: grid inventory, crafting, loot tables, and a procedural affix generation module (“Forge”) — fully data-driven via ScriptableObjects with custom Editor tooling.
- Architected for reuse and extension (assembly definitions, clean runtime/editor separation); in development for Unity Asset Store release.

GPU Ecosystem Simulation — 200,000 Agents *Unity, Compute Shaders*

- Real-time predator–prey ecosystem simulating 200,000 agents on GPU: compute shader behavior updates, spatial hashing for neighbor queries, and GPU indirect rendering — a demonstration of large-scale performance engineering in Unity.

Quick Scene Switcher — Unity Editor Tool (Published) *Unity, Editor Scripting*

- Published Unity Editor extension for fast scene navigation and switching — streamlines multi-scene workflows; publicly released and maintained.

Vinpearl Phu Quoc — Digital Aquarium *Unity + Unreal*

- Interactive game projection environment on wall surfaces and an AR volcano interaction module for a large-scale public installation.

Interactive Installations — Singapore (SDC, HomeTeam NS, Christmas Wonderland) *Unity + Unreal*

- AR sandbox with educational mini-games, AR mirror for virtual uniform fitting, cycling-controlled interactive game, and a cross-platform mobile pipeline (Android & iOS) with rendering optimizations for high-fidelity 3D on constrained hardware.

WORK EXPERIENCE

Software & Game Developer — Ripple Interactive

2025 – Present

- Build gameplay systems, modular architectures, and custom Editor toolsets in Unity (C#) to maximize development efficiency and component reusability.
- Own features end-to-end: technical design, implementation, performance optimization, tooling, and deployment.

Software Engineer — Dreamchasers-Interactive

2020 – 2025

- Engineered gameplay systems for a midcore action roguelike and client projects — AI navigation, combat, boss state machines — in Unity (C#) and Unreal Engine (C++/Blueprints); integrated PlayFab cloud backend.
- Profiled and optimized core gameplay features — projectile and enemy logic — for stable multi-platform performance.

Mobile Developer — FPO

2017 – 2020

- Built iOS and Android applications (Swift, Java) with a focus on performance and UI/UX; shipped cross-platform products with backend and design teams.
