PROFILE

Game and software engineer with 8+ years of professional experience shipping gameplay systems, interactive installations, mobile titles and developer tools. Unity/C# is the primary stack, supported by production Unreal experience and four live casual browser games built with Three.js, React Three Fiber and TypeScript. Strong in architecture, debugging, profiling and end-to-end feature delivery from estimation through deployment.

PROFESSIONAL EXPERIENCE

Software & Game Developer | Ripple Interactive

2025 - Present

- Build gameplay systems, reusable components and custom Unity Editor tools; own technical design, implementation, optimization and deployment.
- Build and deploy casual browser games with Three.js, React Three Fiber and TypeScript alongside Unity, backend services and hardware integrations.
- Use Claude and Codex for rapid prototyping, implementation support and debugging; validate generated output through architecture and code review, functional testing, profiling and manual verification.
- Deliver projects end-to-end, including Magic Mirror, photobooth, an endless runner, SMU Voice and SMU Running.

Software Engineer | Dreamchasers Interactive

2020 - 2025

- Implemented AI navigation, combat, player controls and boss state machines for action games and client projects using Unity and Unreal Engine.
- Built Unreal multiplayer gameplay and state synchronization for real-time combat and mahjong projects, accounting for network latency.
- Optimized rendering, projectile and enemy logic for constrained hardware and multi-platform delivery; integrated PlayFab services.
- Delivered AR and interactive installations for Vinpearl Phu Quoc, Singapore Discovery Centre, HomeTeam NS and Christmas Wonderland.

Mobile Developer | FPO

2017 - 2020

- Developed and maintained cross-platform mobile applications and JavaScript-based features, balancing delivery speed, stability, performance and UI/UX requirements.

CORE EXPERTISE

Gameplay systems · Browser games · Debugging & optimization · Feature estimation · Technical risk communication · Code review · Data-driven architecture · Internal tools · Cross-platform delivery · Git · Agile/Scrum

TUAN KIEU ANH

Live browser games and selected engineering work

LIVE BROWSER GAMES

StackPuzzle 3D | Hexa Tile Match

Three.js, React Three Fiber, TypeScript, WebGL | [Play in browser](#)

- Built a level-based puzzle on a real 3D hex board with validated placement, adjacent-colour merge resolution, move budgets and persistent scoring.

Merge Drop 3D | Physics Merge Arcade

Three.js, React Three Fiber, TypeScript, rigid-body physics | [Play in browser](#)

- Implemented rigid-body stacking, tier merges, combo chains, dual input, persistent scores and WebGL context-loss recovery.

MewShoot | Survivor Arena

Three.js, React Three Fiber, TypeScript, WebGL | [Play in browser](#)

- Created a portrait-first survival loop with auto-combat, continuous enemy spawning, XP levelling, growth tiers and mobile-readable HUD.

CasualShoot | Wave Defense Shooter

Three.js, React Three Fiber, TypeScript, WebGL | [Play in browser](#)

- Built stage-based wave progression, formation movement, multi-projectile volleys, shared wall HP and demo-ready speed/pause controls.

SELECTED UNITY ENGINEERING

Quick Scene Switcher | Unity Editor Tool

Released on Unity Asset Store | Catfe Studio

- Built and maintain an Editor extension for scene navigation in multi-scene Unity projects, including workspaces, thumbnails, search, categories, favorites and hotkeys.

GPU Ecosystem Simulation | 2,000,000 Agents

Unity, Compute Shaders

- Built a GPU-driven predator-prey simulation with compute-shader behavior updates, GPU spatial hashing and a single indirect draw call.

Catfe Vault | Inventory, Crafting & Loot Framework

Unity, C# | Prepared for Unity Asset Store

- Designed a modular data-driven RPG framework with grid inventory, crafting, loot, trading, storage and custom Editor tooling.

TECHNICAL SKILLS

Web game: Three.js, React Three Fiber, TypeScript, JavaScript, HTML5, WebGL, rigid-body physics, responsive browser input and deployment.

Unity & graphics: C#, gameplay systems, Editor scripting, ScriptableObjects, compute shaders, indirect rendering, URP, HLSL, CPU/GPU/memory profiling.

Systems: State machines, pooling, data-driven architecture, command and observer patterns, MVC/MVP, REST APIs and Node.js.

Additional: Unreal Engine 4/5, C++, Blueprints, multiplayer, PlayFab, animation; Git, Perforce, Rider and Visual Studio.

LANGUAGES

English: Intermediate

EDUCATION

Ho Chi Minh City University of Education | Computer Science | 2019
